

Pharmacies and the VFC Program

An Informational Webinar
presented by the Montana Immunization Program

Presenter:
Lori Hutchinson
Vaccine Coordinator
406.444.0277
lhutchinson@mt.gov

Webinar Procedures

- To reduce background noise during the presentation, all participants will be muted except the presenter.
- To ask questions during the presentation, use the “Chat” function. Please send your question to “Everyone” if the question may be of interest to other participants.
- After the presentation, we will unmute the audio line for a live question and answer session.
- We will post this presentation under the “Pharmacy” heading at:
<http://www.dphhs.mt.gov/publichealth/immunization/vaccinesforchildren.shtml>

Background

- 2011 legislature passed Senate Bill 189 allowing pharmacists to administer influenza vaccine to children 12 years and older.
- The VFC Program provides vaccine free-of-charge to Medicaid eligible children 0 through 18 years of age.
- Due to the existence of the VFC Program, Medicaid does not reimburse for vaccine given to Medicaid-eligible children.
- In order for pharmacies to administer influenza vaccine to Medicaid children, they must enroll in the VFC Program and administer VFC vaccine.

VFC Program in Montana

- Federal entitlement program administered nationally by the CDC
- Montana Immunization Program administers the VFC Program in Montana
 - Manage budget and supply chain, enroll providers, and oversee provider compliance
 - Offer full spectrum of pediatric and adolescent vaccines
- Public, private, and specialty providers (pharmacies) can enroll.
- Children through 18 years of age who meet at least one of the following criteria are eligible for the vaccine:
 - Medicaid eligible
 - American Indian/Alaskan Native
 - Uninsured

imMTrax

Montana Immunization Information System

- Plays an important role in the VFC Program.
- Web-based application - launched November 2011:
 - Central repository for patient immunization records
 - Platform for managing VFC vaccine inventory and reporting cold chain data
 - Replaced WIZRD
- All VFC providers are required to use imMTrax to manage VFC vaccine inventory and report cold chain data.
- Pharmacies must enter patient immunization information into imMTrax in order to meet the vaccine inventory reporting requirements.

Impact of Pharmacy Enrollment

- Current VFC Enrollment
 - 234 providers
 - Typically enroll 4–5 new providers each year
- Pharmacy Enrollment:
 - 267 pharmacies that could enroll
 - In time for the 2013-2014 influenza season
 - Challenges:
 - Estimating Influenza vaccine needs for the coming season
 - Staff available for enrollment training/visits.
- Good News: Pharmacies administer only seasonal influenza vaccine so qualify for Streamlined Oversight.

VFC Requirements -

Brief Overview

THIS IS NOT THE MANDATORY ENROLLMENT TRAINING!!!

- Pharmacist and collaborative practice provider must sign a VFC site contract each year.
- You must have vaccine cold storage equipment that reliably maintains proper vaccine storage temperatures. (No dormitory-style refrigerator/freezers)
- Must have in each storage unit a certified calibrated program compliant thermometer (See VFC Handbook Section 14 for details. The Immunization Program supplies thermometers to all VFC providers.)
- Must check and log storage unit temperatures twice daily for every day your facility is open.

VFC Requirements

Continued

- Must screen and document patient VFC eligibility status at each immunization visit.
- Cannot bill patients a dispensing fee over \$21.32 to non-Medicaid VFC-eligible clients.
- Must follow the vaccine administration requirements of the National Childhood Vaccine Injury Act:
 - Provide Vaccine Information Statement (VIS) with every immunization
 - Participate in Vaccine Adverse Event Reporting System (VAERS)
 - Fulfill vaccine administration charting requirements.

Safety and Accountability

Streamlined Oversight

- Under Streamlined Oversight providers still must meet all VFC requirements but are not required to have a routine biennial compliance site visit from the Immunization Program.
- The Immunization Program reserves the right to conduct a compliance site visit if deemed necessary.
- To qualify for streamlined oversight providers must:
 - Only administer seasonal influenza vaccine
 - Must be current and active in the program (current site contract and order vaccine within the calendar year)
 - Have received a documented enrollment visit
 - Submit one month of temperature data from VFC vaccine storage units prior to storing vaccine
 - Agree to vaccinate all “walk-in” VFC-eligible children
 - Not refuse to vaccinate VFC-eligible children based on a parent’s inability to pay the dispensing fee.

Streamlined Oversight

Continued

- Additional Requirements under streamlined oversight:

- Submit monthly to the Immunization Program:

imMTrax

- 
- Temperature logs for storage units
 - An inventory report that includes:
 - Doses on hand by vaccine at beginning of reporting period
 - Doses administered by age cohort during reporting period
 - Doses of vaccine administered by VFC eligibility category for the reporting period
 - Doses received by vaccine during reporting period
 - Doses of vaccine wasted/lost due to mishandling by vaccine for reporting period
 - Doses on hand by vaccine at the end of reporting period.

Streamlined Oversight

Continued

- Additional Requirements under streamlined oversight:
(Continued)
 - Submit monthly to the Immunization Program an additional paper form that provides the following information:
 - A statement signed by the pharmacist or cooperative practice provider certifying that no change in VFC Coordinator or storage units has occurred since the last monthly report.
 - If monthly information shows wasted or unaccounted for vaccine above 5%, temperature excursions, or changes in storage units or VFC coordinator, the Immunization Program must follow up with the pharmacy.

What's Next?

Estimated Timeline

- This webinar is to provide information so pharmacies can decide if they want to enroll.
- If YES - Contact the Immunization Program to get on the enrollment roster 444-5580 hhsiz@mt.gov
- Mid-April we will mail enrollment packets (with enrollment forms) to interested pharmacies.
- Enrollment forms are due back to the Immunization Program by May 30, 2012 to ensure participation for the 2013-2014 flu season.
- In June, the Immunization Program will host several VFC Enrollment Training webinars. Documented participation is mandatory.

What's Next?

Estimated Timeline (continued)

- May through August, Immunization Program field staff will visit pharmacies to inspect storage and temperature monitoring equipment. Visits will take from 15-30 minutes and will be scheduled ahead of time.
- In July, we will distribute the VFC influenza vaccine order form for the 2012-2013 season with it due back to the Immunization Program by early August.
- VFC influenza vaccine typically begins shipping in September and continues through December, as vaccine becomes available at McKesson, our distributor.
- Pharmacies must have completed an enrollment webinar, had an inspection visit, begun participation in imMTrax, and submitted 1 month of temperature data prior to receiving their first VFC vaccine shipment in September.
- imMTrax participation is required year round in order to stay active in the program.

First Step...

- Contact the Immunization Program to get on the enrollment roster
444-5580 hhsiz@mt.gov
